

IN THE CLAIMS:

Please amend Claims 26, 29 and 32 as follows.

Claims 1-25. (Cancelled).

26. (Currently Amended) An image reproducing apparatus capable of displaying an image of an object, picked up by a camera and stored together with information of direction of the camera, on a display device, comprising:

a reproducing device to reproduce a plurality of images picked up by the camera, on the display device; and

a reproducing control device to control reproduction by said reproducing device so as to ~~display~~ reproduce a group of images picked up by the camera ~~whose direction is one,~~ wherein directions of the group of images are in the same predetermined direction, among the plurality of images stored in a storage device, in accordance with the information of direction of the camera.

27. (Previously Presented) An apparatus according to claim 26, further comprising a detecting device to detect a direction of the camera and generate the information of direction of the camera.

28. (Previously Presented) An apparatus according to claim 26, wherein the information of direction of the camera, which is to be stored in the storage device together with the plurality of images, is information as to a direction where the camera is directed when the respective images to be stored in the storage device are picked up.

29. (Currently Amended) An image reproducing method of displaying an image of an object, picked up by a camera and stored together with information of direction of the camera, on a display device, comprising the steps of:

reproducing a plurality of images picked up by the camera in a storage device, on the display device; and

controlling reproduction so as to ~~display~~ reproduce a group of images picked up by the camera ~~whose direction is one~~, wherein directions of the group of images are in the same predetermined direction, among the plurality of images stored in the storage device, in accordance with the information of direction of the camera.

30. (Previously Presented) A method according to claim 29, further comprising a detecting step of detecting a direction of the camera and generating the information of direction of the camera.

31. (Previously Presented) A method according to claim 29, wherein the information of direction of the camera, which is to be stored in the storage device together with the plurality of images, is information as to a direction where the camera is directed when the respective images to be stored in the storage device are picked up.

32. (Currently Amended) A storage medium storing a program for executing a process of displaying an image of an object, picked up by a camera and stored together with information of direction of the camera, on a display device, the program executing the processes of:

reproducing a plurality of images picked up by the camera in a storage device, on the display device; and

controlling reproduction so as to ~~display~~ reproduce a group of images picked up by the camera ~~whose direction is one~~, wherein directions of the group of images are in the same predetermined direction, among the plurality of images stored in the storage device, in accordance with the information of direction of the camera.

33. (Previously Presented) A storage medium according to claim 32, further comprising a detecting process of detecting a direction of the camera and generating the information of direction of the camera.

34. (Previously Presented) A storage medium according to claim 32, wherein the information of direction of the camera, which is to be stored in the storage device together with the plurality of images, is information as to a direction where the camera is directed when the respective images to be stored in the storage device are picked up.
